

Environmental Policy

The Company recognises the importance of sustainable development and the need to preserve our environment on a local, national and global basis. We are a company whose services can impact the environment, and we therefore strive to reduce this as much as possible by:-

- Taking environmental considerations into account when making design decisions
- Implementing more environmentally friendly or 'greener' policies and procedures where possible
- Working in partnership with clients to choose the most cost effective, low environmental impact and low energy/carbon solutions
- Complying with all relevant legal requirements, codes of practice and regulations
- Promoting the environmental policy.

Blueprint also acknowledges the direct impact its own activities and operations have on the environment and therefore aims to reduce this by taking measures to:-

- Minimise paper use in the office and avoiding printing except where absolutely necessary
- Reducing waste and increasing recycling
- Utilising public transport and travel by car sharing, and using telephone conferencing where possible
- Reducing energy use in the office, by switching off equipment that is not in use and employing energy efficient equipment and fittings.
